

GRAB-EEZ™

ESD Cleanroom Wipe Dispenser

Patent Pending

- **Eliminates waste-no loss of wipes!**
- **Approx. Three to five times less expensive!**
- **No cross contamination**
- **User friendly**
- **Easier to use with gloved hands**
- **ESD plastic construction**
- **Conforms to good housekeeping practices**
- **Attractive and convenient dispenser**
- **Countertop and wall mountable**
- **Protected from environment**
- **7"x12" is larger than conventional 9"x9" size**
- **Unique double c-folded design**
- **Extremely low in particles**
- **Extremely low in chemical extractables**
- **ISO Class 5 (class 100) compatible**

Dispenser part # GE-DISP1

The World's Easiest to Use Cleanroom Wipe Dispenser

Typically, cleanroom wipes are supplied in flat sheets and placed on a table in a clean room. Sometimes they are placed flat in trays or shallow bins. Because everyone is required to wear gloves, it is very difficult and cumbersome to obtain ONE wipe. Consequently, employees end up using THREE or MORE WIPES and wasteful use of wipes occurs. This means that a bag of wipes is used up three to five times faster! Consequently costing three to five time more! For example, if a typical bag of 300 wipes costs \$18 and one intended wipe is used, the bag costs \$18. If four extra wipes are taken, the bag is used up five times faster and the bag, in effect costs \$90!

Furthermore, because it is usually necessary to "thumb" or "fan" through the edges of the stack of wipes, in the attempt to obtain these wipes, cross contamination often occurs since gloved hands are usually soiled. Also, the once neat pile of wipes becomes exposed and messy, an objectionable occurrence in a room which is supposed to be clean, neat, and sometimes sterile.
